# PhpStorm IDE Key Features

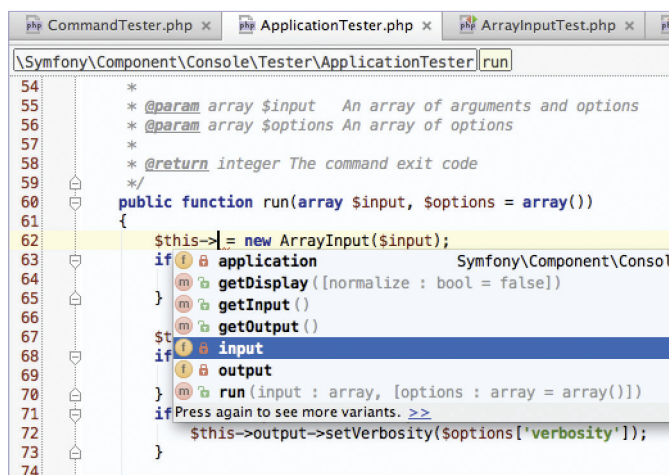

## Smart PHP Code Editor

PhpStorm features an editor that actually “gets” your code and deeply understands its structure, supporting PHP 5.3, 5.4, 5.5 and 5.6 for modern and legacy projects.

The IDE provides the best code autocompletion, refactorings, on-the-fly error prevention, supports language mixtures and more.

Automated refactorings treat your code with care, helping you make global project changes easily and safely.

- Smart Rename / Copy / Move
- Extract Variable / Constant / Field / Method
- Inline variable
- Push members Up / Pull members Down
- Change signature
- Code Generation (Getters, Setters, Constructors, etc.)

## Code Quality Analysis

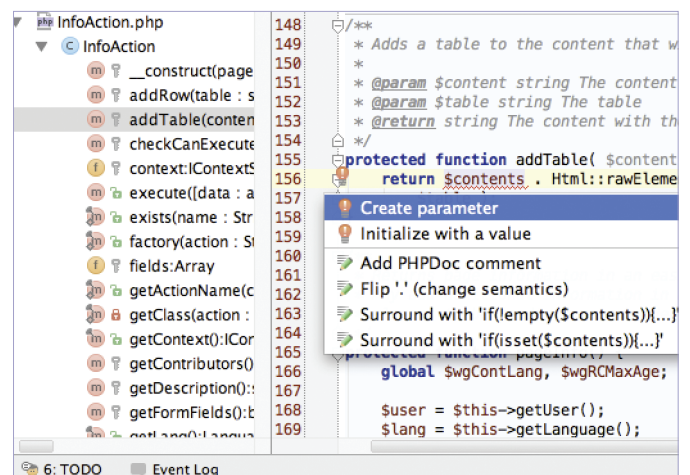

Hundreds of code inspections verify your code as you type, inspecting the whole project for possible errors or code smells.

PHPDoc support, code (re)arranger, code formatter with code style configuration and other features help you write neat code that's easy to support.

Quick-fixes for most inspections make it easy to fix or improve the code instantly. Alt+Enter shows appropriate options for each inspection.

Built-in Smart Duplicated Code Detector takes care of keeping your code dry while integrated PHP Code Sniffer helps with checking your code on the fly.

PhpStorm contains built-in PSR1/PSR2, Symfony2, Zend, and Drupal compliant code formatting.

# HTML, CSS, JavaScript

## HTML and CSS Editor

All the cutting edge web development technologies are supported including HTML5, CSS, SASS, SCSS, LESS, CoffeeScript, ECMAScript Harmony, Jade templates, etc.

PhpStorm detects and suggests auto-fixes for such problems as:

- Missing closing tags
- Wrong references to files
- Duplicate attributes
- Invalid CSS selectors
- Unused JS parameters
- and more...

## Live Edit

Live Edit gives you an opportunity to see all the changes instantly in the browser without refreshing the page. Just install the browser extension, and while you are editing HTML, CSS or JavaScript in PhpStorm, Live Edit will reload the corresponding browser pages and highlight the elements you are working on. Completion lookup is also live.

## High-Speed Coding

HTML editor allows you to utilize all the power of Emmet (former Zen Coding). Define your own abbreviations (snippets) with Live Templates or use pre-defined for PHP, HTML, CSS, JS and other languages.

## Debugging, Testing and Profiling

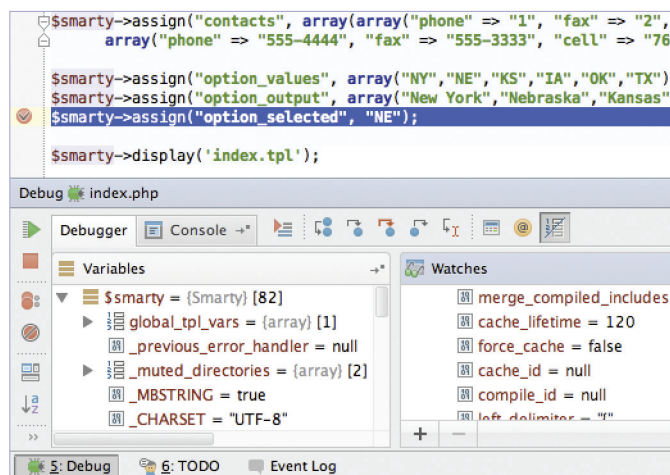

Zero-configuration debugging makes it really easy to debug your PHP applications.

PhpStorm provides numerous options for debugging your PHP code with Visual Debugger, so you can:

- Inspect variables and user-defined watches
- Set breakpoints and evaluate an expression in runtime
- Debug remote applications
- Debug a page in multiple sessions simultaneously

Develop PHPUnit tests right in PhpStorm and run them instantly from a directory, file or class using the context menu options. Code Coverage for PHPUnit shows you how much of your code is covered with tests.

Profile your applications with Xdebug or Zend Debugger and check aggregated reports in PhpStorm.

## Complete Development Environment

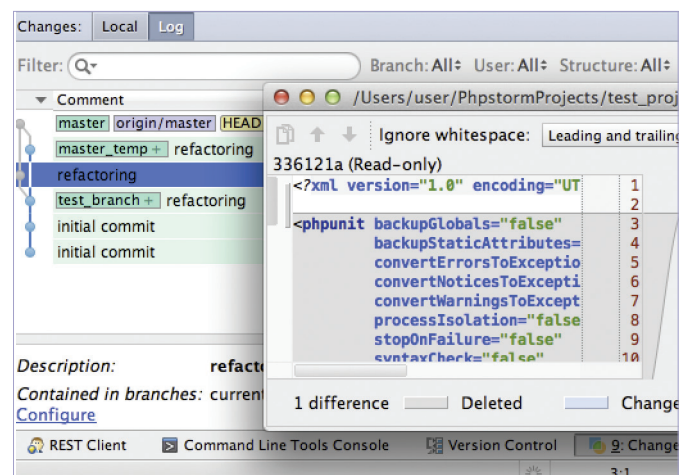

Perform many routine tasks right from the IDE.

Enjoy first class support for Version Control Systems including Git, SVN, Mercurial, Perforce, CVS, TFS.

All the tedious tasks (e.g. adding or removing files) are performed automatically. A built-in visual merge tool resolves all conflicts in a quick and intuitive manner. The changes made locally are highlighted in the editor gutter as you type.

Other notable features include:

- Composer support
- Built-in REST Client
- Databases support
- SQL Editor
- Editable PHP UML
- Issue Trackers Integration
- Vagrant support
- SSH Client & Remote Tools
- Built-in Terminal
- Remote hosts deployment
- Command-Line Tools
- Phing Support

## HTML, CSS, JavaScript

### New Technologies

PhpStorm provides streamlined experience for the full development cycle with new languages such as TypeScript, CoffeeScript and Dart:

- Code completion and analysis
- Automatic compilation/transpilation of these languages into JS with File Watchers (works for SASS, SCSS, LESS into CSS too)
- Full-featured debugging of CoffeeScript, TypeScript, Dart or minified JS with the help of source maps.

### JavaScript Editor

The smartest JavaScript Editor is bundled with the IDE, offering:

- Code completion
- Validation and quick-fixes
- Refactorings
- JSDoc type annotations support
- JavaScript debugging and unit testing
- Support for JavaScript Frameworks
